

Commercial/Healthcare Exchange PA Criteria

Effective: June 2008

Prior Authorization: Cimzia

Products Affected: Cimzia (certolizumab pegol) injection

Medication Description: Certolizumab pegol is a tumor necrosis factor (TNF) inhibitor, which acts by binding and selectively neutralizing TNF-alfa. It does not neutralize TNF-beta. The inhibition of TNF-alfa, which is strongly expressed in the bowel wall and feces of patients with Crohn's disease results in an interference in the production of downstream inflammatory mediators, including interleukin-1, prostaglandins, platelet activating factor, and nitric oxide.

Covered Uses:

1. Treatment of moderate to severe Crohn's disease
2. Treatment of moderate to severe rheumatoid arthritis
3. Treatment of psoriatic arthritis
4. Treatment of ankylosing spondylitis
5. Treatment of moderate to severe plaque psoriasis
6. Treatment of nonradiographic axial spondyloarthritis

Exclusion Criteria: Concurrent Use with a Biologic or with a Targeted Synthetic Disease-Modifying Antirheumatic Drug (DMARD)

Required Medical Information:

1. Diagnosis
2. Previous medications tried/failed

Age Restrictions: 18 years of age and older

Prescriber Restrictions:

Ankylosing Spondylitis, rheumatoid arthritis, nonradiographic axial spondyloarthritis: Prescribed by, or in consultation, with a rheumatologist.

Crohn's Disease: Prescribed by, or in consultation, with a gastroenterologist.

Psoriatic Arthritis: Prescribed by, or in consultation, with a rheumatologist or a dermatologist.

Plaque psoriasis: Prescribed by, or in consultation, with a dermatologist.

Coverage Duration:

Initial: 3 months

Continuation: 3 years

Other Criteria:

Dosing Limitations: *Only allow additional quantity for loading dose purposes*

Subcutaneous Adult Dosage Regimen (Crohn's disease)

Last Res. 8.1.2020

Confidential Information

This document is confidential and proprietary to ConnectiCare. Unauthorized use and distribution are prohibited.

1. *The recommended dose is 400 mg (given as two subcutaneous injections of 200 mg) given at Week 0, Week 2 and 4, followed by every 4 weeks thereafter.*

Subcutaneous Adult Dosage Regimen (Rheumatoid Arthritis, Psoriatic Arthritis, Ankylosing Spondylitis, and Non-Radiographic Axial Spondyloarthritis)

1. *The recommended dose is 400 mg (given as two subcutaneous injections of 200 mg) at Week 0, Week 2 and 4, followed by 200 mg every other week or 400 mg every 4 weeks.*

Subcutaneous Adult Dosage Regimen (Plaque Psoriasis)

1. *The recommended dose is 400 mg (given as 2 subcutaneous injections of 200 mg each) every other week.*
2. *For patients weighing less than 90kg, a dose of 400 mg (given as 2 subcutaneous injections of 200 mg each) at Week 0, Weeks 2 and 4, followed by 200 mg every other week may be considered.*

Pharmacy Benefit:

Crohn's Disease

- Patient has had a previous trial with, contraindication to, or intolerance to at least ONE form of conventional therapy including: aminosalicylates (e.g. mesalamine and sulfasalazine), immunomodulators (i.e. azathioprine) or corticosteroids; **OR**
- Crohn's disease is steroid dependent and unable to be weaned or patient has Crohn's related fistulas; **AND**
- Documented failure of, intolerance to Humira

Rheumatoid arthritis and Psoriatic Arthritis

- Patient has documented failure or intolerance to an adequate trial of NSAID/COX-2 or steroid therapy; **AND**
- Patient has documented failure or intolerance to an adequate trial (at least 3 months) of ONE DMARD (e.g., methotrexate [oral or injectable], leflunomide, and sulfasalazine); **AND**
- Patient must have a trial and documented failure of, or intolerance to, **TWO** of the following medications [documentation required]:

Rheumatoid Arthritis	Psoriatic Arthritis
Actemra SC	Cosentyx
Enbrel	Enbrel
Humira	Humira
Xeljanz XR	Stelara SC
Rinvoq	Xeljanz/XR

	Otezla
--	--------

Ankylosing Spondylitis

- Patient has documented failure or intolerance to an adequate trial of NSAID/COX-2 or steroid therapy
- Patient must have a trial and documented failure of, or intolerance to, **TWO** of the following medications [documentation required]:

Ankylosing Spondylitis
Cosentyx
Enbrel
Humira

Nonradiographic Axial Spondyloarthritis:

- Patient has documented failure or intolerance to an adequate trial of NSAID/COX-2 or steroid therapy

Plaque Psoriasis

- Patient has chronic (greater than or equal to 1 year) plaque psoriasis; AND
- Patient has minimum body surface area involvement with plaque psoriasis of $\geq 10\%$; AND
- Patient has a documented failure of, or intolerance to, or contraindication to at least one traditional systemic agent (eg, MTX, cyclosporin) for at least 3 months, unless intolerant. *Women of childbearing age may be given special consideration for approval without systemic therapy when topical and phototherapy options have been tried and failed;* AND
- Documented failure of, or intolerance to, **TWO** of the following [documentation required]:

Psoriasis
Cosentyx
Humira
Otezla
Skyrizi
Stelara SC
Tremfya

Medical benefit:

Crohn's Disease

- Patient has had a previous trial with, contraindication to, or intolerance to at least ONE form of conventional therapy including: aminosalicylates (e.g. mesalamine and sulfasalazine), immunomodulators (i.e. azathioprine) or corticosteroids; **OR**
- Crohn's disease is steroid dependent and unable to be weaned or patient has Crohn's related fistulas

Rheumatoid arthritis and Psoriatic Arthritis

- Patient has documented failure or intolerance to an adequate trial of NSAID/COX-2 or steroid therapy; **AND**
- Patient has documented failure or intolerance to an adequate trial (at least 3 months) of ONE DMARD (e.g., methotrexate [oral or injectable], leflunomide, and sulfasalazine)

Ankylosing Spondylitis and Nonradiographic Axial Spondyloarthritis:

- Patient has documented failure or intolerance to an adequate trial of NSAID/COX-2 or steroid therapy

NOTE: ConnectiCare does not consider alcohol use to be a clinical reason to use Cimzia over methotrexate.
