**Guideline**
(For lab testing, see Lyme Disease Testing Reimbursement Policy)

I. Members with a confirmed Lyme disease diagnosis are eligible for an initial 2–4-week course of intravenous (IV) antibiotic therapy when the following criteria are met; any:

A. Lyme arthritis that persists after failing to respond to a 4-week course of appropriate oral antibiotic therapy

B. Lyme carditis — moderate to severe cardiac involvement as evidenced by any of the following:
   1. 1st-degree heart block with P-R interval ≥ 300 milliseconds
   2. Myopericarditis
   3. 2nd- or higher degree atrio-ventricular block

C. Neurologic involvement of Lyme disease (neuroborreliosis) as evidenced by any of the following:
   1. Encephalomyelitis, based on MRI imaging, CSF pleocytosis, and no other cause found
   2. Meningitis confirmed by CSF analysis showing a lymphocytic pleocytosis

Proprietary information of EmblemHealth/ConnectiCare. © 2023 EmblemHealth & Affiliates
3. Sensory/motor radiculoneuropathy or peripheral neuropathy (weakness and/or pain in the extremities or chest)

D. All cases of Lyme disease in pregnant women who exhibit symptoms and signs of any of the following:
   1. Stage II Lyme disease with early dissemination documented by organ-specific manifestations of infection (arthritic, cardiac, or neurologic)
   2. Stage III late Lyme disease documented by findings of arthritis and/or neurologic complications, such as encephalomyelitis and subacute encephalitis

II. The following antibiotics constitute medically necessary IV therapy:
   A. Ceftriaxone (Rocephin®)
   B. Cefotaxime (Claforan®)
   C. Penicillin G
   D. Azithromycin (Zithromax®) — for members intolerant to b-lactam antibiotics

Limitations and Exclusions
I. Intravenous therapy with the following drugs is not considered medically necessary due to insufficient evidence of therapeutic value; any:
   A. Carbapenems (e.g., doripenem, ertapenem, imipenem, meropenem)
   B. First-generation cephalosporins (e.g., cefazolin)
   C. Azole antifungals
   D. Fluoroquinolones (e.g., levofloxacin, moxifloxacin)

II. Repeat 2–4-weeks of outpatient IV therapy is considered medically necessary when the following criteria are met; all:
   A. The member has met the criteria for an initial course of intravenous antibiotic therapy, using lab results obtained within the past 3 months
   B. The member has completed an initial course of appropriate intravenous antibiotic therapy
   C. The member has objective evidence of either relapse of infection, progression of Lyme disease organ damage, and/or the finding of a new focus or type of organ damage

III. Intravenous therapy for the following indications is not considered medically necessary due to insufficient evidence of therapeutic value; any:
   A. Early Lyme disease (i.e., erythema migrans without any systemic manifestations)
   B. Flu-like syndrome (fatigue, fever, headache, mildly stiff neck, arthralgias, and myalgias)
   C. Initial treatment of Lyme arthritis
   D. Non-specific subjective symptoms, such as persistent, chronically debilitating fatigue (chronic fatigue syndrome), difficulty in concentrating, musculoskeletal pain (fibromyalgia), and headache
   E. Pregnant woman presenting with localized Lyme disease manifested as a single lesion of erythema migrans without any other symptoms suggestive of disseminated disease
   F. Treatment of "post-Lyme disease" syndrome (i.e., persistent fatigue)
   G. Treatment of individuals with systemic symptoms without serologic or cerebrospinal fluid (CSF) studies confirming Lyme disease
H. Prophylactic treatment of asymptomatic members when the sole evidence of Lyme disease is a positive immunologic test (ELISA, IFA, or Western blot)

I. Treatment of persistent Lyme-associated arthritis after 2 prior courses of antibiotic therapy

J. Mild cardiac involvement of Lyme disease as evidenced by any of the following:
   - Transient ST-T depression
   - T-wave changes

IV. Repeat or prolonged courses of IV antibiotics (> 8 weeks) has not been shown to improve net health outcomes and are not considered medically necessary

V. The following treatments are not considered medically necessary treatment for Lyme disease due to insufficient evidence of therapeutic value:
   A. Chelation
   B. Hyperbaric oxygen therapy
   C. Singlet oxygen therapy
   D. Intravenous ascorbic acid
   E. Intravenous magnesium

Procedure Codes

<tr>
<th>Company(ies)</th>
<th>DATE</th>
<th>REVISION</th>
</tr>
</thead>
</table>
| EmblemHealth/ConnectiCare  | Jun. 9, 2023 | Changed policy title from “Lyme Disease Diagnosis and Treatment” to “Lyme Disease Intravenous Treatment”  
Added hyperlink for lab test component to Lyme Disease Testing Reimbursement Policy  
Clarified that repeat or prolonged courses of IV antibiotics > 8 weeks (previously 4 weeks) is not considered medically necessary |
| EmblemHealth/ConnectiCare  | Jan. 8, 2021 | Expanded definition section regarding I scapularis and Borrelia miyamotoi  
Added link to the 2020 Clinical Practice Guidelines by the Infectious Diseases Society of America (IDSA), American Academy of Neurology (AAN), and American College of Rheumatology (ACR) Guidelines for the Prevention, Diagnosis and Treatment of Lyme Disease to diagnostic testing  
Modified initial/repeat IV therapy treatment course from greater than four weeks to two-four weeks  
Clarified that early Lyme disease refers to erythema migrans without any systemic manifestations  
Added that diagnostic testing is not considered medically necessary unless recommended within the IDSA/AAN/ACR Clinical Practice Guidelines |
| ConnectiCare               | Dec. 12, 2020 | ConnectiCare adopts the clinical criteria of its parent corporation EmblemHealth                                                                                                                         |
| EmblemHealth              | Oct. 13, 2017 | Removed congestive heart failure from Lyme carditis indication sub-criteria list; clarified and simplified neurologic involvement sub-criteria; removed 1st degree heart block and left ventricular dysfunction from mild cardiac involvement sub-criteria list |
